

Accelerate adoption of Documents tool with odrive

Help your users get the most out of the company and project level Documents tool in Procore. Sync files directly from Mac Finder or Windows Explorer. Increase productivity, drive adoption, and raise satisfaction by making it easier to access files.

Here's how odrive works for you.

Work directly on your files

Sync is a simpler way for your users to use Procore Documents without having to go through a web interface. Changes made to files through Finder or Windows Explorer automatically sync to Procore, and everyone always has access to the latest version.

Unify access to all documents

Link all storage to odrive for direct access to all files with one login. You can unify any number of Procore, SharePoint, OneDrive, Google Drive, Box, and Dropbox accounts. Leverage unification to simplify workflow and reduce helpdesk tickets.

Save disk space and bandwidth

Files initially show up as placeholder cloud files that do not take up disk space. Content downloads only when you access a file the first time, saving disk space and bandwidth.

Send secure weblinks to files or folders

Create weblinks to share with anyone, including those outside of your Procore account. For security, you can add an optional password and expiration date.

Maintain the same file permission model

File access through odrive follows the same access permissions defined in Procore.

Protect against data loss

Files uploaded through odrive support all the Documents tool features, including keeping version history and audit information.
